

Task 5: Prime Numbers

Create A C programm that prints out the prime numbers in ascending order.

Task 5: Tipps

Tipp 1: A simple way to check for primes is to compare them to all smaller numbers. If a divisor is found, its not prime, otherwise it is.

Tipp 2: To check whether an integer is evenly divisible by another, you can use

```
(my_potential_prime % my_divisor == 0)
```

Tipp3: You might want to create a helper function `is_prime` that checks whether an individual number is prime.
